

Remote Interview Practice Portal

An AI-Powered Interactive Preparation Platform — built to help candidates practice smarter, get faster feedback, and walk into every interview with confidence.

The Challenge of Interview Prep

Most candidates prepare in isolation — without structure, timely feedback, or a realistic practice environment. That gap costs opportunities.

Lack of Structure

Candidates struggle to organize preparation dates, track sessions, and maintain consistent study routines.

Delayed Feedback

Mock interviews typically require waiting days for manual review — too slow to course-correct.

Interview Anxiety

No realistic sandbox environment exists to practice verbal or technical responses under pressure.

Unified Practice & Evaluation Hub

Three core pillars work together to create a seamless, end-to-end interview preparation experience — all in one interface.

Dynamic Interview Planner

Manage upcoming, previous, and missed mock sessions in a single organized dashboard.

Interactive Mock Interviews

Simulated testing interface with real-time AI evaluation and instant scoring.

Performance Analytics

Clear metrics showing scoring progress, subject breakdowns, and improvement trends.

Dynamic Interview Planner

Company-Specific Preparation Paths

Users schedule and track preparation tailored to each target company, keeping every session purposeful and organized.

→ Real-time countdown timers keep candidates aware of upcoming deadlines.

→ Cards automatically switch to **Live Now** status with orange accents when an interview is active.

→ Missed and completed sessions are tracked separately for full preparation history.

Secure Passwordless OTP Authentication

Security is built in from the ground up — no passwords to steal, no vulnerable login forms to exploit.

Account Protection

Eliminates password-based vulnerabilities by replacing them with one-time verification codes.

Nodemailer Integration

A 6-digit verification code is sent directly to the user's inbox on request via Gmail SMTP.

Session Lock-Outs

Repeated failed attempts trigger automatic lock-outs, preventing brute-force attacks.

The screenshot shows a web application interface for a 'Remote Interview Practice Portal'. At the top, there is a dark blue header bar with a microphone icon on the left and a 'Register' link on the right. The main content area has a light blue background. In the center, the title 'Remote Interview Practice Portal' is displayed in a large, bold, dark blue font, followed by a subtitle: 'A platform that helps users practice interviews, improve skills, and build confidence anytime, anywhere.' On the right side, there is a white login form with a light blue shadow. The form has two tabs: 'Login' (selected) and 'Register'. It contains an 'EMAIL' field with the placeholder 'Enter email', a 'PASSWORD' field with the placeholder 'Enter password' and a toggle eye icon, a dark blue 'Login' button, and a 'Forgot Password?' link below the button.

Architecture & Technology Stack

A modern, lightweight stack chosen for performance, simplicity, and seamless serverless deployment.

Frontend

Responsive HTML5, Vanilla CSS, and JavaScript — no heavy frameworks, just clean, fast UI.

Backend

Node.js & Express running as Serverless Functions on Vercel for zero-config scaling.

Database

MongoDB Atlas with Mongoose ODM for flexible, document-based data modeling.

Services

Nodemailer via Gmail SMTP for reliable, secure OTP email delivery.

Scalable Live Deployment on Vercel

The entire platform is deployed free on Vercel's serverless infrastructure — with dynamic API routing and on-demand database connections.

User Browser

The diagram consists of three horizontal arrows pointing to the right, stacked vertically. The top arrow is dark red and labeled 'User Browser'. The middle arrow is a medium red and labeled 'Vercel API'. The bottom arrow is a bright orange and labeled 'MongoDB Atlas'. The arrows are of increasing length from top to bottom, suggesting a sequence of steps in a process.

Vercel API

MongoDB Atlas

API Rewrites in `vercel.json` route all backend requests dynamically to serverless functions. Mongoose connects to MongoDB Atlas automatically during each active request cycle — no persistent server required.

Session Security & JWT Control

Multi-Layer Protection

Every layer of the authentication and session system is hardened against common attack vectors.

Hashed Passwords

Credentials are stored using modern hashing algorithms — never in plain text.

JWT Session Tokens

Login sessions are protected with JSON Web Tokens featuring automatic expiration.

CORS & Rate Limiting

Middleware configured to prevent server overload, scripting abuse, and cross-origin attacks.

LIVE NOW

Project Milestones

The Remote Interview Practice Portal is fully built, secured, and deployed — ready for real-world use.

✓ Local Development

Fully functional local configuration with all features tested and operational.

✉ Gmail SMTP Live

Outbound email integration successfully bypasses port blocks on Render and Vercel.

🚀 Deployed Live

Platform is live at remote-interview-practice-portal.vercel.app
